

Amendments to the Claims:

1. (Currently Amended) A method of ~~notifying a call forwarding party about a forwarded call, said method~~ comprising:

forwarding a call from a calling party to a destination defined by said a call forwarding party;

establishing ~~processable data~~ content of a notification about said forwarded call; and

sending said notification comprising said content by a service of a communication network to a terminal of said call forwarding party, ~~wherein said content of the notification comprises information about at least a type of forwarding and said terminal of said call forwarding party is different from the destination defined by said call forwarding party~~ when a break-off condition is fulfilled; and

sending a message to the terminal of said call forwarding party indicating whether to accept or refuse a continuation of said forwarding.

2. (Currently Amended) The method according to claim 1, wherein said ~~processable data~~ content comprises information about at least one of a calling party number, a call duration, a time of forwarding, a call charge and a number to which said call has been forwarded.

3. – 5. (Cancelled)

6. (Previously Presented) The method according to claim 1, wherein said sending of the notification is performed by utilizing a packet data bearer.

7. (Previously Presented) The method according to claim 1, wherein said type of notification comprises speech transmission of a voice processing server.

8. – 11. (Cancelled)

12. (Currently Amended) The method according to claim 1, wherein said processable data-content includes at least part of conditions that have resulted in the call-forwarding.

13. – 14. (Cancelled)

15. (Currently Amended) The method according to claim 1 ~~claim-14~~, wherein said break-off condition is one of a maximal call charge and a maximal call duration.

16. (Currently Amended) The method according to claim 1 ~~claim-14~~, wherein said break-off condition depends on a calling party number, including a possibility that no break-off condition exists for certain calling party numbers.

17. (Cancelled)

18. (Currently Amended) The method according to claim 1 ~~claim-17~~, wherein said forwarding ~~forwarded-call~~ is cleared if the message is not answered ~~there is no input~~ within a specified time.

19. (Previously Presented) The method according to claim 14, wherein a reaction of said terminal to said prompting is automatically performed according to a presetting of said terminal, which presetting is input by said user.

20. (Currently Amended) ~~A communication network comprising a call forwarding service device~~ The apparatus according to claim 46, wherein said processor is further configured to:

determine a calling party number and ~~a device configured to~~ measure a call duration of ~~a forwarding~~ the forwarded call; and

~~a service device configured to send a~~ include in the notification comprising information
~~about at least a type of forwarding to a terminal of a call forwarding party that is different from a~~
~~call forwarding destination of an associated forwarded call.~~

21. (Currently Amended) The ~~apparatus communication network~~ according to claim 20, wherein said ~~processor is further call forwarding service device is also configured to~~ determine a time of forwarding, a call charge and a number to which said call has been forwarded.

22. (Currently Amended) The ~~apparatus communication network~~ according to claim 46 ~~claim 20~~, further comprising a voice ~~processor processing server device.~~

23. – 24. (Cancelled)

25. (Currently Amended) An apparatus ~~A terminal for forwarding a calling, said terminal~~ comprising:

a processor configured to set means adapted for setting a call forwarding conditions
service device of a communication network to which network said terminal subscribes; and
define a break-off condition for the call forwarding conditions and the break-off condition to
means adapted for receiving ~~receive~~ a notification comprising content about a forwarded call
information about at least a type of forwarding from said call forwarding service device which
was directed to and forwarded by said terminal to a call forwarding destination that is different
from said terminal according to the setting of said corresponding means; and means adapted for
displaying a content of said notification and a message informing that said break-off condition is
fulfilled and prompting whether to accept or refuse a continuation of said call forwarding.

26. (Currently Amended) The ~~apparatus terminal~~ according to claim 25, wherein the
processor is further configured to process ~~comprising means for processing~~ data corresponding to
information comprised by said content of said notification.

27. (Currently Amended) The apparatus terminal according to claim 26, wherein the processor is further configured to automatically accept or refuse the continuation of said call forwarding in reaction to the prompting. further comprising means for automatically performing a reaction to a prompting of a user of said terminal by a service of said communication network for sending said notification, which automatic performance is preset by said user.

28. – 43. (Cancelled)

44. (Currently Amended) A computer program product comprising a tangible computer-readable storage medium having computer-readable program code portions stored therein, the computer-readable program code portions comprising:

a first executable code portion configured to forward a call from a calling party to a destination defined by a call forwarding party;

a second executable code portion configured to establish processable data content of a notification about said forwarded call; ~~the processable data content including information about at least a type of forwardings; and~~

a third executable code portion configured to define and store a break-off condition for the forwarding;

a fourth executable code portion configured to send said notification comprising said content by a service of a communication network to a terminal of said call forwarding party when said break-off condition is fulfilled; and that is different from the destination defined by the call forwarding party.

a fifth executable code portion configured to send a message to the terminal of said call forwarding party indicating whether to accept or refuse a continuation of said forwarding.

45. (Cancelled)

46. (New) An apparatus comprising:

a controller configured to forward a call from a calling party to a destination defined by a call forwarding party;

a processor configured to establish content of a notification about said forwarded call;

a storage configured to input and store a break-off condition for the forwarding; and

a transmitter configured to send said notification comprising said content to a terminal of said call forwarding party when said break-off condition is fulfilled, and to send a message to the terminal of said call forwarding party indicating whether to accept or refuse a continuation of said forwarding.

47. (New) The apparatus according to claim 21, wherein the processor is further configured to include in the notification any of the determined or measured information.

48. (New) An apparatus, comprising:

means for forwarding a call from a calling party to a destination defined by a call forwarding party;

means for establishing content of a notification about said forwarded call;

means for inputting and storing a break-off condition for the forwarding; and

means for sending said notification comprising said content to a terminal of said call forwarding party when said break-off condition is fulfilled, and for sending a message to the terminal of said call forwarding party indicating whether to accept or refuse a continuation of said forwarding.

49. (New) An apparatus, comprising:

means for setting call forwarding conditions and for defining a break-off condition for the call forwarding; and

means for sending the call forwarding conditions and the break-off condition and for receiving a notification comprising content about a forwarded call and a message informing that said break-off condition is fulfilled and prompting whether to accept or refuse a continuation of said call forwarding.
